

## **VIII. ECONOMIC ACTIVITY AND BUSINESS DEVELOPMENT**

### **C. LAND, CONSTRUCTION AND DESIGN OF PHYSICAL PLANT**

#### **6. CASINO**

*Submit as Exhibit VIII. C.6.d. a description of the attributes of the slot accounting system that is planned for Applicant's operation, which allows the Gaming Commission access for the purposes of auditing revenues and game status.*

*LIVE! plans to select the systems that are state-of-the art in the market place at the actual time of purchase. Those systems would at minimum include the attributes of the programs and products currently in use at LIVE!'s affiliated casino Maryland Live! Casino which are described below.*

#### **Oasis 360 Casino Management System**

Built on an open platform, Oasis 360 is the industry's most dynamic, and best solution. Oasis 360 is a total casino management solution encompassing slot accounting, patron management, floor operations, table games operations, advanced bonus programs, business intelligence and online gaming applications.

Oasis 360 has achieved success by combining enhanced customer management and business intelligence features, such as:

- Online real-time tracking of events as they occur.
- A graphical user interface (GUI) that provides a visual representation of the casino floor.
- Faster performance, with immediate access to information for improved customer service.

These integrated features and enhancements transform Oasis 360 into a comprehensive casino management solution; offering you strength and versatility with an open platform that remains flexible enough to adapt to your individual and changing needs.

#### **Comprehensive Real-Time Information**

Oasis 360 uses advanced electronic monitoring equipment to interface with hundreds of different gaming devices. Advanced communication capabilities allow Oasis 360 to monitor an extensive list of critical game, player, and security events as they occur. These events include exact jackpot amounts, coin and currency transactions, door openings, and all standard tilt code messages. This

means that accounting statistics and player information are available to casino personnel as events occur on the gaming floor, precisely, accurately and in real time.

### **Slot Accounting**

BlackBart™ is the foundation for slot operations. BlackBart is a sophisticated online accounting system that tracks machine activity with proven flexibility and reliability, providing static and revenue information for individual machines, groups of machines, and the entire casino floor. Real-time metered revenue information is available on demand, including estimated net win and coin-in information.

Oasis 360 tracks all casino floor transactions and drop information, including jackpots and fills, PersonalBanker transactions, and voucher, bill and coin drops, and all of this data is uploaded into BlackBart, for complete, accurate real time information.

### **Quickets Voucher Processing System**

The Quickets™ voucher system provides a tool to issue, redeem, track, monitor and expire vouchers. Vouchers are cashable, machine-generated slips of paper that print when a player presses the Cash Out button on an EGM. Players can easily redeem vouchers by inserting them into an EGM bill validator (just like paper currency), by taking them to a workstation location, a cashier or floor person, or by using a kiosk that accepts vouchers in exchange for cash and coin.

### **Jackpot and Fill Monitoring and Processing Tool**

Jackpot/Fill™ provides a flexible and automated method for monitoring and processing jackpots, fills, and preventive maintenance fills. It automatically creates W-2G, 1099, and 1042-S tax forms. When a jackpot is hit or the hopper is empty, Jackpot/Fill sends a signal to the Oasis 360 System, consisting of the jackpot amount and/or the location of the machine.

Jackpot/Fill also has support for ATM dispensing, reducing player wait time and providing quicker access to their jackpots and increasing customer satisfaction.

### **Diagnostic Monitor**

Diagnostic Monitor™ is your tool box to manage OASIS hardware and EGMs monitored by Oasis 360. It provides the real-time **and** historical database information you need to perform quality troubleshooting. The Current Notebook provides different views of current gaming activity. The Maintenance Notebook provides different views of machine maintenance activity.
