

X. WORKFORCE ENHANCEMENT FACTORS

C. SUSTAINABILITY AND RESOURCE MANAGEMENT

5. WATER CONSERVATION

Submit as Exhibit X. C.5. a description of plans for water efficiency and conservation at the Gaming Facility including, without limitation, plans to use low--flow water fixtures, water efficient appliances, and implement water conservation at the Gaming Facility.

The project is being designed and documented to minimize the use of potable water in the building and also in the landscape.

Water Efficiency on Site:

The landscape for the project will be designed with native and adaptive plants and will not have any permanent irrigation system.

Water Efficiency in the Building:

The project will comply with the Energy Policy Act (EPAct) 2006 as a baseline. The plumbing fixtures for the project will be selected to be low-flow fixtures to exceed the minimum requirements and anticipates a 30% water use reduction below EPAct.
